

# How to operate Steamin' Demon Hot Dog Steamer

---

## Installation

Install the Steamin' Demon in a level position. Plug in the cord to a suitable outlet of the correct voltage.

## Operating Procedure

1. Remove the hot dog basket and juice tray and add approximately ten quarts (NO MORE) of water into the heating compartment so that the water level is above the heating element. Tip- using hot water will reduce the heating time.
2. Place the hot dogs in the small compartment and the buns in the wire rack in a large compartment. Arrange the hot dogs and buns so that there is free circulation of steam.
3. Turn the switch to the "ON" position and set the thermostat control on "HIGH" until steam is generated.
4. For normal operation, set the thermostat control in the center (between "LOW" and "HIGH") once the steam is generated. The steaming compartments have been designed to deliver the proper amount of steam in each compartment. No adjustments are necessary.
5. Keep the lids closed while not serving.
6. Check and add more water as necessary to maintain the water level (add hot water if possible)
